Absolute™ Retail/POS

OUR PRODUCT CATALOGUE

Real-Time Inventory

These systems provide real-time information on inventory levels and allow retailers to restore their inventory with popular items and make informed purchasing decisions.

Track Cash Register

A cash register is a piece of hardware that helps to process payments, like a card reader. It also helps you to track your business cash securely.

Manage Petty Cash Expenses

Petty cash controls small cash. Petty cash has some rules to manage the expenses that go in and out of that box. Petty cash exists as small funds in an office or other incidentals

Create Customer Orders

You can capture customer orders where shoppers want to pick up products later, ship items to customers, or pick up items from a different location.

Unlimited Products

You can add an unlimited number of products and variants in your retail/POS system so that you never miss out on stock outs of popular selling products.

Barcode Setup

Barcode setting follows the accurate procedures to track inventory count and movement status accurately.

Tax

Our amazing tax technology system simplifies compliance. If you want to disable tax for a specific product or order you can do that.

Easy Order Flow

POS software automates and organizes processes so that you can track and monitor delivery addresses.

Multiple Payment Types

Our POS system is a smart and intelligent system, when transactions are made on the POS app it will add taxes and calculate the total amount of sales.

Absolute™ Inventory

OUR PRODUCT CATALOGUE

Inventory Grading System

The inventory classification system completely depends on the nature of the business, and each unit is important & has an economic value to add to the inventory system.

Multi-Location Inventory

Multi-location inventory management is a proper way to allow businesses to track and manage inventory in different locations at the same time. It helps you to increase the visibility into inventory levels that can help businesses to reduce costs.

Multi-Warehouse Inventory

If you are thinking about how to manage multiple warehouses, we've created a multiple warehouse management software system that not only helps you to survive but to thrive as you expand your business.

Physical Stock Audit

In the physical auditing process, you must be aware of the physical count of stock and inventory to match the records in the system as well.

Barcode Creation

It is one of the advanced technologies that are effective and reliable in terms of asset tracking. The Barcode creation process is very economical in price, and it removes the problems of spreadsheet usage.

Dynamic Item Code Creation

Item code is a unique combination of code and product description. We will help you to create a new item code or equivalent item code as per the company norms and conditions.

Inventory Quality Check

The quality check process in inventories or warehouses extends the capabilities and provides the option to create qualitative products for the inventory.

Multiple SKU Management

It will help your business to process everything smoothly. SKU management evolves to codified SKU language so that there is no chance of having two items ever carry the same SKU.

Multi-Level Inventory

You can manage product categories and sub-categories up to five levels through multi-level software.

Damage Inventory Management

Damage inventory management software shows the damaged product numbers and how you can protect and save it from getting damaged.

Consumables Management

Consumable inventory software management refers to consumer goods that can't be measurable during production. Implement top-notch inventory management software so that you can manage each category at the time of production and generate more revenue

Inventory Auto Updation

Inventory automation helps to keep monitoring inventory location, valuation and audit, inventory ordering, and selling. An automated inventory system provides end-to-end solutions.

GRN Management

Good Receive notes helps you to record and shown as a proof that ordered products had been received.

Store Management

Inventory software targets to manage your inventory effectively which helps you to save big costs and time. Take the decisions timely and get a clear picture of when to recover the stock or sell the old stock.

Approval on Inventory

Inventory approval process automates the whole approving system and makes it easy for you. The approval process can be changed many times as per the management decisions and the level of approval increases inventory safety and prevents any losses.

Reorder/Minimum Stock Level

The reorder stock level is fixed stock that lies between minimum and maximum stock levels. The minimum stock level indicates the below level which actual stock material should not be allowed to fall.

Item Expiry Management

You can use the FEFO method (first expiry first out) and FIFO (first in first out). By using this technique, you can push those products to sell out first and avoid obsolescence.

Rack/ Bin Management

Choose the perfect inventory software that helps you to maintain product placement on your warehouse Bin and racks so that you can manage orders effectively.

Roles and Access System

You can create different user roles to keep your information secure and data threat.

Fast/Slow/Not moving Status

Fast, slow, or not moving in inventory management is an advanced technique to segregate inventory items based on their consumption rate and quantity rate at which the inventory is used

Inventory Aging

When your inventory goods are not sold quickly, retailers track aging inventory before they are marked out as dead stock.

Custom Notification

Custom notification acts as an auto reminder when your inventory gets low or overstocked.

Absolute™ Project Management

Projects Roadmaps and Timelines

The main purpose is to provide a high-level visual project representation of the larger project plan and build comprehensive roadmaps for multiple projects that run in parallel..

Milestones Creation

With the help of project management software, you can differentiate milestones from other elements of a timeline. It helps you to keep things on track in your project.

Task Management

Task management software streamlines the task management process and gives more control over project tasks and teams that refer to work together better to complete assigned tasks

Project Dashboards to Get a Quick Overview
